**SAFETY
REBOOT**

What is Safety Reboot?

The CEF's Safety Reboot initiative is running throughout January 2024

The aim is to refocus on key areas of health and safety

Stop what you are doing, gather with colleagues in groups

Take 15 minutes to discuss the chosen topic using the following questions as a guide

Share your pictures on social media #safetyreboot2024

Temporary Works: Introduction

- Most building sites will at some stage have temporary works as part of the construction process.
- All temporary works need to be properly planned, managed and monitored due to the serious consequences which could result if they go wrong.

Who can give examples of construction work that could involve temporary works?

So, what is the difference between temporary works and permanent works?

What can be the health and safety consequences of poorly planned or poorly managed temporary works?

Can anyone give an example where temporary works have gone wrong?

Can anyone
organise temporary
works?

Does anyone know the names of the two key roles who help coordinate and manage temporary works?

What paperwork
can be used to
better plan and
manage temporary
works?

If we were doing work which could make a structure unstable, CDM tells us that we should take all practicable measures where necessary to prevent danger to any person, to ensure that any new or existing structure does not collapse. Who knows what practicable means?

Can you take it upon yourself to remove measures that have been put in place to manage temporary works e.g. remove acrow props?

What should you do if you have a concern about a temporary works issue?

Thanks for
getting
involved.

Remember to
use what you
have learned
today
